## Experience

### Software Engineer

Qualtrics - TextiQ Team

Feb. 2020 - Present

- Enrichment team member. The enrichment pipeline controller speeds up data processing by 600x compared to legacy
- Developed and own TextiQ's sentiment enrichment worker, which has tagged hundreds of millions of survey responses with sentiment at ~180 rec/sec
- Created a data scraper in Python used by the machine learning team to aggregate datasets and train production models
- TextiQ team disaster recovery owner. Restart all services in the case of database failure
- Contribute production level code in Scala, React, and Angular in both our frontend and backend services

### Machine Learning Intern

Kohn Pedersen Fox

June 2019 - October 2020

- Focused on researching experimental ML approaches and productionizing them
- Developed end-to-end ML pipeline to rapidly and accurately estimate the impact of wind speeds on building design. The pipeline is used by KPF's sustainability team.
- Extended a base U-Net architecture to be ~94% accurate per pixel for wind speed estimates
- Pioneered an error visualization for U-Net model output using image derivatives

### Teaching Assistant

Columbia University Dept. Computer Science  
COMS-4701 Artificial Intelligence

September 2018 - December 2018

- Ran recitation sections, graded homework, and hosted weekly office hours

## Education

### Columbia University

BS in Computer Science

Intelligent System Track

2017 - 2019

- GPA 3.5/4.0
- Dean's List Fall 2018, Spring 2019
- Jerry and Evelyn Bishop Scholarship recipient
- Relevant coursework: Advanced Computer Vision, Advanced Spoken Language Processing, Natural Language Processing, Advanced Programming

### Whitman College

BA in Mathematics/ Pre-Computer Science

2015 - 2017

- Liberal Arts and Engineering Combined Plan

## Skills and Abilities

- Languages: Scala, Javascript, Python, C/C++
- Development Libraries: React, Angular, Django, Flask
- ML Libraries: PyTorch, Tensorflow, OpenCV, scikit-learn, NumPy, Pandas, matplotlib, Bokeh
- Software Dev tools: Git/Github, Docker, Linux, Agile development, Jenkins, Rundeck, Nomad
- Cloud Services: AWS Sagemaker, S3, SQS

## Accomplishments

- Work highlighted during KPF presentation at NVIDIA's GTC 2020 GPU Technology Conference
- A December 2020 Employee of the month
- Top 5% of students in Columbia's Computer Vision course. One of 4 undergraduates invited to selective, graduate level seminar on Computer Vision (Advanced Computer Vision).
