Work Experience

Senior Software Engineer/ Team Lead Mill

Jan. 2022 - Present

- **Second software hire**
- **Led a 5-engineer team** in migrating a backend service, originally developed by an external consultancy. **Saved Mill \$900K/year in third-party maintenance fees.**
- **Lead the development and implementation of Mill's climate impact features**, including a mobile app tab, an end-of-year impact summary, and automated monthly user impact emails. The release of these features was **responsible for an 11 point increase in Mill's company wide NPS.**
- Developed an IoT data processing pipeline from device to data warehouse which has **successfully processed over 1 trillion GB of data** to date.
- **Coordinated and developed a three-tier development architecture** covering all aspects of the product lifecycle, from mobile app to website to cloud infrastructure.
- **Designed, built, and maintain a suite of secure factory stations** for device provisioning, ensuring protection against knock-offs, DDOS attacks, and malicious actors connecting to Mill's servers.
- **Designed, built, and maintain a text messaging bot** for field trials, facilitating data collection that **reduced device energy use by 33%** via subsequent algorithm optimization.
- **Implemented temperature compensation** for our device's mass system, **improving mass reading consistency by 40%** during cooldown periods.
- **Mentored and onboarded junior engineers and interns**

Software Engineer

Qualtrics

Feb. 2020 - Dec. 2021

- **Contributed production level code in Scala and React** in both our frontend and backend services.
- Developed and maintained a sentiment enrichment worker, **tagging hundreds of millions of survey responses at approximately 180 records per second.**

Education

Columbia University

BS in Computer Science
Intelligent System Track

- Dean's List Fall 2018, Spring 2019
- Jerry and Evelyn Bishop Scholarship recipient
- Relevant coursework: Data Visualization, Computer Vision, Advanced Computer Vision, Advanced Spoken Language Processing, Natural Language Processing, Advanced Programming

Technical Skills

Python

RESTful APIs

NumPy

MQTT

ML training and visualization

SQL

Web development

Additional Skills

- Proficient in clear and effective communication to both technical and non-technical audiences
- Creative problem solving within constraints driven environments
- Cross functional collaboration
- Eager to learn and quick to absorb knowledge
